BRADLEY ROBLES

Software Developer | Web Applications · Data · Business Tools
Clovis, NM · bradleyrobles88@gmail.com · linkedin.com/in/bradley-robles · github.com/CodeHappy753

SUMMARY

I'm a software developer who enjoys building web applications and data tools that make people's work a little easier. Most of my experience comes from telemetry monitoring, internal business apps and data reporting, where I've worked closely with teams to figure out what they need and build something that helps. I'm always learning new tools, using AI-assisted development to build and solve problems faster. I've worked remote, hybrid and on-site, and my hands-on field experience gives me a real understanding of the people and equipment behind the data.

TECHNICAL SKILLS

Applications & Web: OutSystems, WordPress, JavaScript, HTML/CSS, REST APIs
Data: Microsoft Fabric, Power BI, DAX, SQL Server, MySQL, Redis, Azure
DevOps & Tools: Azure DevOps, Git, GitHub, VS Code, Visual Studio, Freshworks
AI Tools: Claude, GitHub Copilot, Copilot CLI, AI agents
Automation: Visual Basic (VBA), Excel
Collaboration: Agile/Scrum, gathering requirements, working across teams, prioritizing business needs
Also Familiar With: C#, .NET / ASP.NET MVC, Python, Django

EXPERIENCE

Business Intelligence Developer | Kodiak Gas Services Jun 2026 – Nov 2026
IT & Development · The Woodlands, TX

- Maintained and supported telemetry monitoring for power generation units within Kodiak's telemetry system.
- Built and maintained internal business applications in OutSystems, including an employee hub for connecting, sharing files and submitting forms.
- Fixed bugs and resolved support tickets through Freshworks to keep applications running for employees in the field and office.
- Worked with data pipelines and reports in Microsoft Fabric and Power BI.
- Managed projects and source code through Azure DevOps and GitHub.
- Partnered with teams across the business to gather requirements and make sure the most important needs were delivered first.
- Used Claude, GitHub Copilot and Copilot CLI daily to build, debug and ship faster.

Control System Engineer | Distributed Power Solutions Jul 2024 – Jul 2026
Acquired by Kodiak Gas Services · Texas

- Developed web applications to monitor live telemetry data from around 400 to 500 power generation units in the field.
- Built the data flow that collects unit data, stages it locally and uploads it to a MySQL database on Azure for live display.
- Built the monitoring site as a custom WordPress plugin with live dashboards and historical data logs.
- Built Visual Basic and Excel automation tools that generate reports from unit telemetry files.
- Worked hands-on with field equipment and managed parts inventory through the company's parts system.

Software Developer | Prosper IT Consulting Nov 2022 – Dec 2022

- Built a Python and Django application with full CRUD functionality, API integration and data scraping.
- Contributed a rental page to a theater company's website using C#, ASP.NET MVC and Entity Framework.
- Collaborated with other developers in an Agile/Scrum team.

Additional Experience | Inventory management and field operations

EDUCATION

The Tech Academy | Software Developer Bootcamp (Computer Software Engineering) 2022 – 2023
Midland College | Associate's Degree, General Studies 2021 – 2023
